

PIKE PERCH FROM DENMARK

farmed with care – loved by chefs

At AquaPri, we have farmed pike perch with care and precision since 2005. For over two decades, we've fine-tuned every aspect of our production – from genetics and breeding to feeding and farming methods – to become one of the world's most skilled producers of farmed pike perch.

Today, our fish are renowned for their pure, white meat, their mild, refined flavour, and a firm yet tender texture that makes them a delight to cook. Naturally high in protein, pike perch is a healthy, delicious, and versatile choice for discerning kitchens. Every fish we deliver is the result of years of experience, innovation, and dedication – and chefs can taste the difference.

Recognised by the best

In May 2025, AquaPri pike perch starred in the Danish selection for Bocuse d'Or 2027, where top chefs praised its delicacy, versatility, and consistent quality. We're proud to support the culinary world with a fish that inspires creativity – and performs to perfection.

Why AquaPri Pike Perch?

Fresh deliveries, all year round

We harvest to order and deliver consistently high quality – no matter the season.

Completely fresh fish

We move fast. Typically, within 6 hours of harvest, our pike perch is chilled, packed on ice, and ready for dispatch – as fresh as it gets.

Culinary excellence

With its clean taste and elegant appearance, our pike perch is ideal for fine dining. It handles heat beautifully and is equally impressive raw – perfect for sushi, sashimi, ceviche, and crudo.

Food safety & traceability

Our fish are raised without antibiotics and exclusively fed non-GMO feed, and traceable through every step – from hatchery to packing.

No freezing needed

Thanks to our controlled, closed farming environment, AquaPri pike perch is parasite-free and does not require freezing before raw consumption.

Responsibly farmed

Our farming takes place in an indoor system, utilizing water from our own well.

As wild pike perch stocks decline due to overfishing, we offer a responsible alternative.
